and Feel
the difference
from the Leader in
LED Photopulsation

RevLight™ is a trademark of Subcon
Manufacturing Corporation, Inc.

#77-0004311 Rev. A

Developed by Dermatologists

Recapture a more youthful looking appearance with dermatologist-developed RevLight™ skin care treatments.

Now you can safely and gradually alleviate your skin's signs of aging by enjoying a RevLight™ skin care treatment given by your skin care professional.

What is the RevLight™ Skincare System?

Developed by dermatologists who knew the average person did not need an invasive, sometimes painful procedure to minimize the signs of aging, RevLight™ incorporates a unique photopulsation technology. Photopulsation uses light-emitting diodes, or LEDs as the basis of a revolutionary skin care system for skin care professionals. The frequency and duration of the LEDs in the photopulsation process are the keys to RevLight's™ safe and effective light technology that gradually helps alleviate the signs of aging.

Is RevLight™ affordable?

The cost of a RevLight™ skin care treatment is very affordable. Check with your skin care professional for details.

What areas can be treated?

The RevLight™ treatment is especially effective in helping to improve the appearance of the skin on your face, back, chest, and hands.

What results can I expect?

Your skin will appear smoother, tighter, and more radiant, showing continued gradual improvements in your skin's appearance with each subsequent treatment. We recommend that you take a photograph of yourself before your first treatment, and after your sixth, you'll see the difference!

What does a RevLight™ treatment consist of?

Each relaxing treatment takes approximately 10 to 20 minutes. Beginning with a cleaned face, a trained professional will place eye protection over your eyes, then move the light applicators over your face and begin the treatment. Now sit back and relax.

How many treatments will I need?

A series of six treatments is recommended. After each treatment you should notice an improvement in the appearance of your skin. To maintain the results of the RevLight™ treatments, one treatment per month is recommended.

Be Skin Smart

Now there's an alternative to other skin treatments...

Smiling, frowning, or sun exposure can emphasize fine lines and wrinkles on your skin. Do you have to live with them? Not anymore.

The RevLight™ Skincare System is the most advanced skin care technology available today. It is a non-invasive, gentle, and effective cosmetic skin treatment easily performed by your skin care professional. Because RevLight™ uses an innovative, safe photopulsation light technology, you can improve the appearance of your skin easily and painlessly. And you'll be surprised at how affordable a Revlight™ skin care treatment is.

A skin care program of RevLight™ treatments will improve the clarity and smoothness of most types of skin, while minimizing the appearance of fine lines and wrinkles. The RevLight™ Skincare System is recommended by dermatologists.

The RevLight™ Skincare System

- Helps alleviate the subtle effects of aging
- Helps the skin appear more radiant, plump and smooth.
- Helps visibly diminish the appearance of fine lines and wrinkles.
- Helps tighten unsightly pores.
- Uses the latest, state-of-the-art skin care technology
- Treatment is painless and there is no recovery time involved.
